Krishnakumar S Rathod

Full Stack Developer | React Native | AWS · Node.js · Docker · Linux
| AI Automation
Greater Bengaluru Area

Summary

Full Stack Engineer | Node.js · React Native · PostgreSQL · AWS .I build and ship production products end-to-end — frontend, backend, database, and the infrastructure they run on.As a technical founder, I've designed and delivered three live products: a QR-based restaurant dine-in SaaS (Node.js, PostgreSQL, Redis, BullMQ, offline-first PWA), a hyperlocal food delivery platform with three separate React Native apps for customers, restaurants, and riders (Node.js, Express, TypeScript, PostgreSQL/PostGIS, MongoDB, Razorpay, FCM), and an automated wedding invitation video platform with a distributed rendering pipeline coordinated over Socket.IO across Linux and Windows servers.Core stack: Node.js, Express, TypeScript, React Native (Expo), PostgreSQL, MongoDB, Redis, REST APIs, payment gateway integration, real-time systemsInfrastructure I own: AWS (EC2, S3, CloudFront), Docker, Nginx reverse proxy with SSL, PM2, CI/CD pipelines, Linux server administrationBecause I've built solo, I've had to handle everything from schema design and API architecture to deployment and uptime — which means I write backend code with operational reality in mind.I also build AI automation workflows using n8n, WhatsApp bots, and AI agents for real business use cases, and use AI-assisted engineering tools (Claude Code) to move faster.Alongside building, I train engineering students and professionals in Cloud, DevOps, and AI as a Technical Trainer at Happy Minds AI Learning Center across Kalaburagi, Bangalore, and Hyderabad.Currently deepening Kubernetes, Terraform, and GitHub Actions.Open to Full Stack Engineer, Backend Engineer, and Software Engineer roles — Bangalore or remote.

Experience

TavaQ

Founder & Tech Lead

January 2026 - Present (8 months)

Kalaburagi

Building a QR-based restaurant dine-in SaaS as solo technical founder.

TavaQ— Restaurant Dine-In SaaS

A QR-based restaurant management system targeting independent restaurants as an alternative to Petpooja and Toast POS. Tech Stack: - Backend: Node.js + PostgreSQL + Redis + BullMQ - Infrastructure: AWS Mumbai (ap-south-1) - PWA with offline-first architecture Key Features Built: - QR code table ordering system - Kitchen Display System (KDS) - AI Waiter assistant - UPI + split billing support - Group ordering via QR sharing - Multilingual support — Kannada, Urdu, English - Offline-first Android architecture Infrastructure: - AWS EC2 for backend hosting - AWS S3 for media storage - Nginx reverse proxy with SSL - PM2 for process management - Docker for containerized deployments

Namma Oota

Co-Founder & Tech Lead

March 2023 - December 2024 (1 year 10 months)

Kalaburagi

Designed and developed a hyperlocal food delivery platform with 3 dedicated apps as technical co-founder.

NAMMA OOTA — Hyperlocal Food Delivery Platform

A complete Zomato-style food delivery application built for the Kalaburagi market with 3 separate apps — Customer, Restaurant, and Rider. Tech Stack: - Frontend: React Native (Expo) — cross-platform mobile apps - Backend: Node.js + Express.js + TypeScript - Database: PostgreSQL with PostGIS (location), MongoDB - Cache & Queue: Redis + BullMQ for order processing - Payments: Razorpay with signature verification - Notifications: Firebase Cloud Messaging (FCM) - Infrastructure: AWS EC2, S3, CloudFront, Nginx - Architecture: Unified users table with junction-based roles Key Features Built: - Real-time order tracking - Multi-restaurant support - Rider assignment system - Payment gateway integration - Push notifications - Location-based restaurant discovery

Tara Invitation Video Maker

Founder & Full Stack Developer

January 2022 - March 2023 (1 year 3 months)

Gulbarga

Built a complete automated wedding invitation video creation platform from scratch. Customers could upload photos, enter details, and receive

personalized rendered videos automatically.

Tech Stack: Node.js, Express.js, MongoDB Atlas,
AWS EC2, S3, CloudFront, Nginx, Socket.IO, Docker,
Adobe After Effects (Aerender automation)

Key Engineering Work:

- Built automated video rendering pipeline using After Effects + Aerender with dynamic text and image replacement
- Designed real-time job communication system between Linux server and Windows render agent using Socket.IO
- Managed complete AWS infrastructure: EC2 (Ubuntu + Windows Server), S3 for asset storage, CloudFront for CDN delivery
- Configured Nginx reverse proxy with SSL and domain routing on Linux

Education

Himalayan University, Arunachal Pradesh
Bachelor of Arts, Arts · (June 2014 - July 2017)

Jawahar Navodaya Vidyalaya - JNV
Secondary School Education, General Studies · (June 2005 - March 2010)
