

KRISHNAKUMAR S RATHOD

Full Stack Engineer · Node.js · TypeScript · React Native · PostgreSQL · AWS

+91 99002 12178 | kktheperformer@gmail.com | Bengaluru, India | github.com/krishnakumar-rathod | [Portfolio](#) | [LinkedIn](#)

SUMMARY

Full Stack Engineer / Backend Engineer with 8 years building for the web — the last 4 focused on Node.js and TypeScript backends, React Native apps and AWS infrastructure. Sole engineer on three complete products spanning mobile, API, database and Linux server layers, and previously a freelance developer delivering client websites and backend work. Experienced in REST API design, payment gateway integration, background job processing and CI/CD, and comfortable owning a feature from schema design through to production deployment and uptime.

TECHNICAL SKILLS

Backend Node.js, Express, TypeScript, REST APIs, JWT auth, Socket.IO, BullMQ, background workers

Frontend React Native (Expo), React.js, JavaScript, HTML5, CSS, WordPress, Progressive Web Apps, offline-first architecture

Databases PostgreSQL, PostGIS, MongoDB, Redis, schema design, migrations, query optimisation

Cloud & DevOps AWS (EC2, S3, CloudFront, IAM), Docker, Nginx reverse proxy with SSL, PM2, Linux administration, VPS and shared hosting, DNS and domain configuration, CI/CD, Git

Integrations Razorpay, UPI, Firebase Cloud Messaging, webhook handling, n8n automation

Certification AWS Certified Solutions Architect – Associate (SAA-C03) — in progress

EXPERIENCE

Technical Trainer — App Development, Cloud & DevOps — Happy Minds AI Learning Center

Jan 2026 – Present · Kalaburagi, Bangalore & Hyderabad

- Deliver hands-on training in React Native development, Linux administration, AWS core services (EC2, S3, VPC, IAM) and DevOps fundamentals across three centres.
- Guide students through building and deploying complete applications end to end, from project setup to production release.

Full Stack Engineer (Founder & Tech Lead) — TavaQ — QR restaurant dine-in SaaS

Jan 2026 – Present · Kalaburagi

- Building a QR-based dine-in ordering platform for independent restaurants: table QR ordering, Kitchen Display System, UPI split billing and a multilingual interface in Kannada, Urdu and English.
- Designed an **offline-first PWA** with client-generated idempotency keys and server-side deduplication, so ordering continues through network loss and syncs on reconnect without creating duplicate orders.
- Stack: Node.js, PostgreSQL, Redis, BullMQ, Docker, AWS EC2 (ap-south-1), Nginx with SSL, PM2. Demo: pos-tavaq.lovable.app

Full Stack Engineer (Co-Founder & Tech Lead) — Namma Oota — hyperlocal food delivery platform

Mar 2023 – Dec 2025 · Kalaburagi

- Built **three React Native apps** — customer, restaurant and rider — on a single Node.js/TypeScript backend with real-time order tracking across all three.
- Implemented **Razorpay payments with server-side HMAC signature verification** and webhook reconciliation as the source of truth; all prices and bills recomputed server-side so the client never determines what a customer pays.
- Built restaurant discovery on **PostGIS spatial queries with a GiST index** (ST_DWithin, nearest-neighbour ordering) rather than in-application distance calculation.
- Moved notifications, rider assignment and payment reconciliation to Redis + BullMQ workers with retries and backoff. Deployed and operated on AWS EC2, S3 and CloudFront behind Nginx with SSL, managed by PM2.

Full Stack Developer (Founder) — Tara Invitation Video Maker

Jan 2022 – Mar 2023 · Kalaburagi

- Built an automated video rendering platform: customers upload photos and details and receive a personalised rendered invitation video with no manual editing step.
- Designed a **distributed render pipeline** — a Linux API server dispatching jobs over Socket.IO to a Windows agent driving Adobe After Effects via the aerender CLI, with render progress streamed live to the browser.
- Added heartbeats, timeouts and bounded retries after render jobs intermittently hung, replacing silent stalls with detectable failures and automatic requeue. Ran the full AWS estate: EC2 (Ubuntu + Windows Server), S3, CloudFront and Nginx with SSL.

Freelance Web Developer — Self-employed — client projects

Aug 2017 – Dec 2021 · Bengaluru

- Built and delivered websites for schools, hotels, restaurants, dance studios, photographers and small businesses using WordPress, HTML, CSS and JavaScript, including portfolio sites for actors and fellow developers.
- Integrated **Razorpay payments for a school online classes platform**, handling domestic and international card payments — the work that led directly to the payment architecture used in Namma Oota.
- Debugged and fixed backend issues in **Node.js** applications for overseas clients, working across unfamiliar codebases to diagnose faults and ship fixes.

EDUCATION

Bachelor of Arts — Himalayan University, Arunachal Pradesh · 2014 – 2017

Pre-University (PCMB), Science — Shree Guru Independent College, Kalaburagi · 2010 – 2012
